

Colourchip®

Location

Pedestrian pavements and footpaths to the new Norwich Riverside development.
 Access road and parking to Norwich Railway Station.
 Pedestrian areas outside Norwich City Football Ground

Material

Colourchip coated gravel chippings (product codes: PC13 & PC14) in gravel hot rolled asphalt.

Why Colourchip®

The architect responsible for the design required a surfacing for large areas of pavements that would give the cost and long life performance of conventional black top surfacing but with a more natural appearance to suit the riverside location.

The Colourchip coated chippings used on the pedestrian areas were a buff/golden gravel aggregate that would be in keeping with the trees and landscaping along the river and also the residential and retail areas of the development.

Colourchip Red and Green Granite chippings (pigmented) were also used to colour access roads and parking bays at Norwich Railway Station as part of the project.

Size

Colourchip coated chippings in hot rolled asphalt

- Gravel – 5300m²
- Red Granite – 1600m²
- Green Granite – 200m²
